#### **Narrative Description**

Riverside Park is a heritage site that honors the history of agriculture that once thrived in the Fort Worth region. The grove of pecan trees spread throughout the site is believed to be a remnant from an early farm dating to the time of the City's founding. This project honors this heritage with a grand-scaled artwork visible throughout the entire park and to drivers on Oakhurst Scenic Drive. Depicted on the surface of the path that traverses the park, the artwork takes the form of a graphical interpretations of the root systems of individual trees on the site. The artists' aim is to call upon the cultural and natural histories of the Trinity River site, however, the artwork will also delight the eyes with color and patterns that can be appreciated by all people regardless of their historical knowledge. Approximately 10,000 square feet of area will be covered with a thermoplastic coating typically used to apply roadway lines and markings.
