Project Location Map

Project location is shown below.

East 1st Street Bridge

Located two miles east of I-35W and one mile north of I-30 in east Fort Worth, the old two-lane East 1st Street vehicular bridge over West Fork Trinity River was recently replaced by a new four-lane East 1st Street vehicular bridge.

This project will repurpose the old two-lane bridge as a recreational trail bridge limited to pedestrian and bicycle use. The repurposed bridge will connect the Gateway Park Trail to the Quannah Parker Park Trail, providing an important link in the Fort Worth to Arlington trail and in the DFW metroplex trail system.
